Teamcenter Infrastructure Administration & Platform Optimization

Modern PLM environments require secure, highly available, and well-governed Teamcenter infrastructure to support engineering collaboration, product data management, and uninterrupted business operations. This use case demonstrates how Teamcenter administration services strengthen platform security, improve operational efficiency, and enhance overall system performance through proactive monitoring, infrastructure optimization, and lifecycle management.

Business Scenario

Organizations using Teamcenter often face increasing demands for platform availability, security, performance, and operational governance as engineering teams and product data continue to grow.

Challenges

- Limited visibility into platform health
- Manual infrastructure monitoring
- Authentication and security complexities
- Performance degradation over time
- Downtime during maintenance activities
- Increasing administration overhead

Solution

- Secure OAuth SSO implementation
- Proactive infrastructure monitoring
- Automate alerting and notifications
- Platform performance optimization
- Upgrade and patch management
- Infrastructure stability improvements

Business Outcomes

- Improved platform availability
- Enhanced system security
- Faster issue resolution
- Optimized infrastructure performance
- Reduced operational overhead
- Increased Engineering productivity
